FOR IMMEDIATE RELEASE

Delaware Court Reduce Hospital Readmissions with Daylight IQ™ COMS Interactive's Disease Management Solution Implemented

Delaware, Ohio – April 22, 2014 – Delaware Court Healthcare Center (“Delaware Court”), a leading post-acute facility, has selected COMS Interactive, LLC, to enhance its clinical care plan. The COMS flagship product, Daylight IQ™, is a key component of the facility's disease management program. A clinical intelligence software product, Daylight IQ™ has proven to enhance resident quality of care while reducing hospital readmission rates. Delaware Court is one of five facilities owned by Levering Management implementing Daylight IQ™.

The only disease management product on the market, the Daylight IQ™ Software as a Service (SaaS) product suite features a series of integrated, disease-based clinical protocols that identify changes in condition at the bedside. Daylight IQ™ highlights abnormal findings and provides the nursing team with appropriate interventions and/or physician communication. Early detection of even minor changes allows the Delaware Court clinical team to quickly address/remedy potential additional health challenges.

“Daylight IQ™ has significantly advanced our nursing teams' communications, and further empowered them to provide an even higher quality of care to our residents,” stated Ken Levering, Administrator, Delaware Court Healthcare Center. “We are pleased with the improved clinical and financial outcomes our staff has been able to achieve.”

Based upon principles of disease care management and standardized nursing processes, Daylight IQ™ captures and analyzes resident disease data at the bedside. The Daylight IQ™ product suite includes an Automated Disease Care Guide Library, a Dynamic Nursing Assessment and Compare Module, all of which work in conjunction with each resident's disease profile. Daylight IQ™ has proven to reduce rehospitalizations by up to 50%, and premature mortality rates by more than 60%.

“On behalf of the entire COMS team, we are excited to be working with Delaware Court,” noted Edward J. Tromczynski, Chief Executive Officer, COMS Interactive. “The company has a significant focus on stabilizing, managing, and streamlining the healing process for chronically ill residents.”

Industry data shows that the average nursing home resident has a complicated disease profile, including one primary disease and up to eight secondary diseases or afflictions. Over 70% of rehospitalizations from a skilled nursing facility are due to a secondary or new disease progression. By providing early detection of an individual's change in condition, Daylight IQ™ highlights potential problems and offers caregivers the opportunity to respond, preventing further progression of the illness or affliction.

About Delaware Court Healthcare Center

Delaware Court Healthcare Center has served the residents of Delaware and Delaware County since 1985. Locally owned, the center specializes in skilled nursing care, progressive wound care, post-operative care, IV therapy, and short-term/respite care. Delaware Court's rehabilitation program therapists treat pain management, stroke recovery, strength building, family/caregiver training, port-cardiac protocols, and outpatient therapies. An array of activities including exercise and educational programs are offered weekly, and individual nutritional meals and snacks are planned. For more information about Delaware Court, please visit www.delawarecourt.com.

About COMS Interactive, LLC

Based in Cleveland, Ohio, COMS Interactive, LLC partners with thirteen state health care associations in deploying processes and systems that stabilize and improve resident health while improving financial outcomes for skilled nursing facilities. The Daylight IQ™ Software as a Service (SaaS) product combines business administration, disease management and long-term healthcare knowledge to empower the nursing team, streamlines the process, more efficiently address patient healthcare needs and increase facility revenues. This combination of clinical and technical processes can save millions of dollars a year in preventable hospital readmissions. Additional information regarding COMS Interactive and Daylight IQ™ is available at www.comsllc.com or by contacting COMS at #330.650.9900.
